PROFESSIONAL SUMMARY

Full-stack engineer with a frontend focus and 2.5+ years of experience building enterprise Angular applications and AI-driven products with React, TypeScript, and NestJS. Led frontend development of ChillMaster, a cloud-based chiller selection platform with role-based workflows. Shipped onboarding flows, async job pipelines, CI/CD, and product analytics for AI-workflow and mock-interview platforms.

TECHNICAL SKILLS

Frontend: Angular, TypeScript, RxJS, Reactive Forms, React, State Management (Redux), HTML5, Tailwind CSS
Backend & Databases: Node.js, NestJS, Express.js, REST APIs, MongoDB, MySQL, JWT Authentication
Cloud & DevOps: GCP (Cloud Tasks), AWS S3, GitHub Actions CI/CD, Pipecat Cloud
Tools & Practices: Git, GitHub, Jira, Agile/Scrum, PostHog, GA4

EXPERIENCE

ChillMaster (Client: Bluestar India)

chillmaster.bluestarindia.com

Angular, TypeScript, Firebase (SSO), TailwindCSS, AWS S3, Bitbucket, Jira

March 2025 – Present

- Led frontend development for ChillMaster, a cloud-based chiller selection & performance analysis platform used by engineers, sales & R&D teams, owning the architecture across 790+ files.
- Implemented a modular component-based architecture with lazy-loaded routes, route guards, and role-based access control (SuperAdmin, Engineer, R&D, Sales), including a dedicated user management module for admin-level control.
- Built the Performance Rating module from scratch, handling unit conversion, validation gating, and COP/IPLV/star-rating/pressure-drop calculations.
- Designed and built a Cost Projector & Compare tool, integrating dynamic metrics and cost calculation logic into a side-by-side comparison UI.
- Created reusable editable grid/table components for inline editing and dynamic row/column management, and led a Data Editor optimization refactor to cut duplicate logic across modules.
- Handled Excel bulk import/validation and document/report generation via AWS S3 presigned URLs, including previews and bulk report generation per chiller series.
- Collaborated with backend (Node.js, MySQL), QA, and product owners via Jira; participated in sprint planning and code reviews.

Neuron – AI Workflow Builder

React / TypeScript, NestJS, MongoDB, GCP Cloud Tasks, PostHog

Aug 2026 – Present

- Built a “Build it with me” guided onboarding for a visual AI-workflow canvas: a spotlight-based tutorial engine, a “get started” checklist, and a task-oriented docs rewrite.
- Instrumented the onboarding and activation funnel with PostHog, and made onboarding state server-owned with atomic, race-free preference writes in NestJS.
- Fixed “false timeout” failures in Describe-to-Create by moving generation to an async GCP Cloud Tasks job with idempotency keys, retry/stall handling, a real Stop control, and robust FE polling.
- Added a workflow-level Stop button, per-neuron Waiting/Running/Completed status, and an ownership-checked stop-run API.
- Hardened agent publishing: input-count bounds on every save path, publish-time compliance checks, and a migration removing empty hidden API inputs.
- Fixed canvas zoom, neuron placement, viewport and autosave bugs; shipped a light/dark theme toggle, mobile fixes, and Prettier/lint-staged hooks.

Encase – AI Mock-Interview Platform

encase.ai

React / TypeScript, NestJS, MongoDB, Pipecat Cloud, GCP

May 2026 – Jul 2026

- Built full-stack features for an AI mock-interview product: onboarding (LinkedIn/resume import with manual fallback), profile, and interview session flows.
- Shipped LinkedIn-aligned structured location and country-driven phone validation across onboarding and profile, with matching NestJS APIs, DTOs, and tests.
- Built Pipecat Cloud CI/CD (manual QA/prod deploy action with pinned, least-privilege workflows), live Simli video, consent/audit APIs, and MediaPipe face analytics with backend persistence.
- Instrumented PostHog product and AI-cost telemetry; shipped SEO/SSG prerendering, GA4, and legal AI-disclosure pages.
- Migrated core NestJS/Mongo entities to UUID business keys, with a production migration runbook and backfill.

- Converted a desktop-only platform into a fully responsive application, improving usability across mobile devices.
- Resolved UI and functional bugs, improving stability and user experience.
- Improved UI responsiveness by optimizing component rendering and reducing unnecessary updates.
- Implemented and refined interactive data visualizations with amCharts.

PERSONAL PROJECTS

Amin Estate
React, Redux, TailwindCSS, Express.js, MongoDB, Node.js

estate-mern-0kti.onrender.com

- Built a real estate platform using the MERN stack emphasizing modern architecture and best practices.
- Implemented advanced authentication including JWT and Google OAuth for secure user access.
- Developed real-world CRUD operations for property listings, enhancing backend experience.
- Enhanced UX with image uploads and advanced search functionality, fully hosted.

Blog Application
React, React Hook Forms, Appwrite

blog-app-05.netlify.app

- Developed a full-featured blog application using React, Redux, React Hooks, Forms, and Appwrite for backend operations.
- Integrated TinyMCE editor for creating and updating blog posts, enhancing the content creation experience.
- Implemented comprehensive CRUD operations with Appwrite, including signup, signin, home, all posts, add post, and individual post pages.

Qid Clone
TailwindCSS, JavaScript, React, React-Router

qid-clone.vercel.app

- Successfully cloned a complex website in 3 days utilizing React, Tailwind CSS, and React Router for navigation.
- Ensured responsive layout across all devices down to 320px, prioritizing user experience for mobile users.
- Replicated website’s core message and functionalities, demonstrating understanding of user needs.

EDUCATION

Rashtrasant Tukadoji Maharaj Nagpur University <i>Bachelor of Computer Applications (BCA)</i>	2023 CGPA: 7.8
Progressive High School <i>12th HSC, State</i>	2020 Percentage: 72.92
